Dogs and Cats. .

Formula

Each 100 g contains:

Gentamicin	0.12 g
Clotrimazole	1.00 g
Betamethasone-17-valerate	0.12 g
Lidocaine	0.50 g
Vitamin A Palmitate	0.06 g*
Formulation agents, q.s.	100.00 g

* Equivalent to 100,000 IU of Vitamin A

Indications

For the treatment of dermatological lesions of various etiologies, including bacterial and fungal infections, traumatic lesions and lesions of allergic origin. Applied to the skin it has:

- Strong antimicrobial activity, covering the most common bacterial and fungal spectrum in dog and cat dermatologic conditions.
- Local Anti-inflammatory action, resolving processes in which inflammation plays a prominent role.
- Local anesthetic action, immediately calms itching and pain characteristic of these pathological conditions.
- Protective skin effect, stimulates epidermal regeneration and healing, due to Vitamin A content .

Dosage and Administration

Apply a thin coat over the area of skin to treat two to four times a day according to the etiology of the process to be treated..

Package

Tubes containing 15 or 40 g.
