

# Opter<sup>®</sup>

Antimycotic, Antibiotic, External Antiparasitic, Steroidal Anti-inflammatory drug.  
Otic solution. For Canines and Felines.

**Fórmula:**

Each 100 mL contains:

Enrofloxacin .....	0,50 g
Clotrimazol .....	1,00 g
Ivermectin .....	0,03 g
Betamethasone (as valerate) .....	0,10 g
Excipients, q.s. ....	100,00 m

**Indications:**

For the treatment of infectious, mycotic and parasitic otitis in canines and felines. Its local anti-inflammatory action relieves the itching and pain often associated with these pathologies.

**Dosage and Administration:**

The product is applied locally in the outer ear canal. Based on the size of the animal, 6-12 drops should be instilled into the outer ear canal and massaging should be applied to the area to promote the adequate distribution of the ingredients. The instillations must be repeated once or twice a day, based on the characteristics of the case, and the treatment should be extended until the symptoms disappear completely or until a modification of the treatment is considered necessary. By way of example, the suggested minimum duration of the treatment is:

For infectious otitis: Treat for 7-14 days For parasitic otitis (*Otodectes* spp): A single administration is usually enough.

For mycotic otitis: 30 days.

It is always advisable to extend the treatment for some more days after the remission of the lesions, especially in the case of mycotic otitis

**Package:**

Bottle containing 25 ml.
