

PIPETTE Power Ultra

Insecticide pipette for dogs that acts on fleas, lice and mites.
Effective repellent against ticks, ear-tip flies, flies and mosquitoes.

Formula

Imidacloprid [1-(2-chloro-5-piridilmetil)-2-(nitroimino) imidazoline]	5.15 g
Permethrin [2,2-dimethyl-3-(2,2-dichlorovinyl) cyclopropyl-1-carboxylate-3-phenoxybenzyl]	40.00 g
Piperonyl butoxide.....	3.00 g
Excipients q.s.	100.00 mL

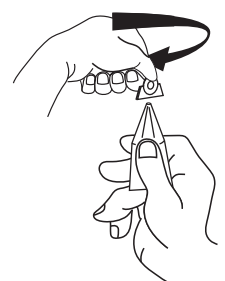

Indications

Power Ultra is indicated for the prevention and treatment of infestations of ectoparasites, helping to prevent the diseases and zoonoses they transmit. This is because in addition to acting on parasites, in the adult and larvae stages, it has a repellent effect on insects and mites, preventing parasites from feeding on the host animal, something especially important when it comes to hematophagous parasites.

It kills adult and larvae stages of *Ctenocephalides canis* and *Ctenocephalides felis*; it also kills and repels *Rhipicephalus sanguineus* in their adult and larvae stages. It kills adult and larvae stages of *Trichodectes canis* and *Otodectes cynotis*.

It repels ear-tip flies (*Stomoxys calcitrans*), domestic flies (*Musca domestica*) and mosquitoes (*Culex spp.*; *Phlebotomidae*).

Piperonyl butoxide acts as synergizant of permethrin increasing the susceptibility of insects and mites to the action of this product.

Dosage and Administration

This product is for external use. Apply the entire content of the pipette on the neck between the nape and the beginning of the back, separating the hair and placing the tip of the pipette on the skin. We recommend applying the product with the animal standing. The animal's coat should be dry. Avoid contact with the animal's eyes and snout.

Dogs:

Weight	Dosage
Over 8 weeks of age from 2 to 10 kg	1 pipette with 1.75 mL.
From 11 to 20 kg	1 pipette with 3.50 mL.
From 21 to 40 kg	1 pipette with 7.00 mL.
From 41 to 60 kg	1 pipette with 10.50 mL.

Note: In the case of puppies or adult dogs with a bodyweight of 3.5 kg or less and up to 10 kg (such as Toy Poodles, Yorkshires, Terriers and other similar breeds), we recommend splitting the content of the pipette, applying 0.6 mL (a third of the total content).

Its residual action varies from 4 to 6 weeks, depending on the environment's infestation. It is a good practice to reapply the product every 4 weeks to ensure efficacy against fleas and ticks, and to properly repel mosquitoes.

Baths with medicated products or shampoos with marked tensoactive properties may decrease the effectiveness or shorten the residual action of the product. Consequently, if the animal is bathed on a regular basis, it is advisable to repeat the treatment.

Package

Box with a tamper-proof plastic pipette for different weights:

Dogs

Over 8 weeks of age and up to 10 kg of bodyweight	1.75 mL pipette
From 11 to 20 kg	3.50 mL pipette
From 21 to 40 kg	7.00 mL pipette
From 41 to 60 kg	10.50 mL pipette
