

Terpán[®] 1000 E

VETERINARY USE

Insecticide. Emulsifiable liquid.

Formula

Dichlorvos (O,O-dimethyl and O-2,2-dichlorovinyl phosphate) 100.0 g
Excipients q.s. 100 mL

Indications

It is indicated for the control of the adult flies and larvae (*Musca domestica*, *Musca autumnalis*) in facilities such as poultry houses, farms, swine breeding farms, stud farms and dairy barns.

Dosage and Administration

To obtain the emulsion: dilute 5 mL of Terpan 1000 E in 1 liter of water. Stir thoroughly.
For the control of flies: 1 liter of emulsion every 80 to 100 m².

For the control of fly larvae: 1 liter of emulsion every 10 m².

Treatment should be repeated in 14 days.

Once the required amount has been prepared, use the product as spray.

The emulsion must be used within 24 hours after preparation.
Do not spray on animals.

Package

Container with 100 mL and 1 liter.
