

Doloalivio[®]

Non-steroidal anti-inflammatory drug. It also acts as analgesic and antipyretic for dogs.

Formula

Each palatable tablet contains:

Etodolac 150.0 mg
Excipients q.s. 2000.0 mg

Indications

Non-steroidal anti-inflammatory drug, analgesic and antipyretic. It is indicated for the treatment of pain and inflammation associated with osteoarthritis, secondary osteoarthritis caused by hip dysplasia and rheumatoid osteoarthritis in dogs.

Dosage and Administration

1 tablet every 10 to 15 kg of bodyweight every 24 hours, by the oral route. Dose should be adjusted until satisfactory clinical response is obtained, but it must not exceed the maximum of 15 mg/kg a day. Duration of treatment will be of eight days. It may be administered with food or on an empty stomach. If you administer the product with food, the total dose should be mixed with a small amount of the food in order to ensure the animal consumes it entirely.

Package

Container with 15 grooved palatable tablets.
