

Meltra[®] Plus

Internal antiparasitic to control intestinal nematodes and tapeworms on dogs and cats.

Formula

Each multi-dose tablet contains:

Albendazole	450.0 mg
Praziquantel	25.0 mg
Excipients q.s.	650.0 mg

Indications

For the control of the following parasites on dogs and cats:

Nematodes: *Toxocara canis*; *Toxascaris leonina*; *Toxocara cati*; *Ancylostoma caninum*; *Uncinaria stenocephala*; *Trichuris vulpis*.

Tapeworms: *Echinococcus granulosus*; *Dipylidium caninum*; *Taenia hydatigena*; *Multiceps multiceps*; *Taenia serialis*; *Taenia ovis*; *Taenia taeniformis*; *Taenia pisciformis*; *Mesocestoides corti*.

Dosage and Administration

1 multi-dose tablet every 5 kg of bodyweight, in a single dose.

The oblong multi-dose tablet can be easily divided to adjust the dosage to the animal's weight; it may be administered to the animal either directly through its mouth or mixed with the food.

For parasite infestations caused by nematodes, repeat the treatment after 20 days. In cases of tapeworms reinfestations, repeat the treatment every 45 days or as determined by the acting veterinarian.

Administer to animals of 45 days of age or older. No fasting is required.

Do not treat pregnant females.

In animals over 25 kg, the dose should be divided in halves and each half be administered in 2 separate doses 12 hours apart.

Package

Boxes containing 8 multi-dose tablets.
