

Totalcoc[®]

Internal antiparasitic in palatable tablets for treatment of coccidiosis and other parasitic diseases caused by protozoa. For dogs and cats.

Formula

Each palatable tablet contains:

Toltrazuril..... 80 mg
Excipients q.s. 400 mg

Indications

Totalcoc is effective for treating parasite infestations caused by the genus *Isospora* spp., acting against all intracellular stages of this parasite. Dogs and cats may be affected by the following species: *I. canis*; *I. ohioensis*; *I. burrowisi*; *I. neorivolta*; *I. rivolta*.

It also acts on other protozoa, and is useful in the treatment of *Hepatozoon canis*, *Toxoplasma gondii* and *Neospora canis* (*Hammondia heydorni*) acting on these parasites in the schizogony and gametogony stages.

Dosage and Administration

Totalcoc is administered at a dose of 20 mg/kg, i.e. one tablet every 4 kg of bodyweight in dogs and cats. In the treatment of coccidiosis this amount is administered in a single dose. In the case of *Hepatozoon canis* infestations the dose should be repeated for 2 to 6 days as determined by the acting veterinarian. The same treatment may be used in animals affected by *Neospora caninum*.

Package

Boxes containing 2 palatable tablets.
